EDUCATION

SUNY – Stony Brook University

Master of Science, Computer Science

Aug 2023 – May 2025

New York, USA

- Courses: Computer Architecture, OS, Distributed Systems, System Security, Theory of Databases, Analysis of Algorithms
- Teaching Assistant: CSE 316: Fundamentals of Software Development

University of Mumbai – Thadomal Shahani Engineering College

Bachelor of Engineering, Information Technology

Aug 2019 – May 2023

Mumbai, India

TECHNICAL SKILLS

Languages and Databases: C, C++, Java, Python, Go, System Verilog; PostgreSQL, MySQL, MongoDB, Firebase

Tools/Web/CI: Unix/Linux, Docker, QEMU, GTKWave, Kubernetes, React.js, Node.js, Flask, HTML/CSS/JS, AWS-EC2, S3

WORK EXPERIENCE

Graduate Research Assistant: GPU and CPU Profiling

Stony Brook University

May 2024 – Present

New York, US

- Engineered a CPU Energy Flamegraph tool using Linux perf_events, eBPF and [PowerAPI](#) to trace CPU call chains and monitor power consumption per cgroup, enhancing energy efficiency analysis for developers.
- Crafted a GPU Energy Flamegraph tool using CUPTI and NVML to monitor GPU power consumption per kernel, enhancing GPU power usage insights for optimization.

Software Intern

Suven Consultants

Jun 2021 – Aug 2021

Mumbai, India

- Devised a Home Inventory and Loan Management tool using Java and SQLite3; gained 150+ active users in the first month.
- Implemented an advanced Printable interface with Java AWT and the Graphics Library to generate professional PDF reports in under 2 seconds per report—boosting document accessibility by 75% and processing over 150 reports weekly.

PROJECTS

Computer Architecture – RISC-V Processor | System Verilog, GTKWave, C

Jun 2024 – Oct 2024

- Designed a synthesizable multi-cycle in-order RISC-V (RV64IM) processor which communicates with memory over [AXI4 protocol](#)
- Implemented an ALU to execute instructions, and interact with register file, supporting pipeline stalls.
- Integrated branch prediction, 2 set-associative L1 caches, load/stores and ECALL (syscall) instructions with pipeline flush.

Kernel Programming – File Systems | C, QEMU

Mar 2024 – May 2024

- Constructed an asynchronous journaling protocol in xv6, reducing disk write() latency by up to 94%.
- Added small file support with file type conversion, optimizing disk space utilization and reducing disk I/O by 95% for files < 52B.

Distributed Systems – Key-Value Store with Raft Consensus | C++

Aug 2023 – Dec 2023

- Architected a persistent k-v store using Raft for leader election and data replication. Added snapshotting for quick recovery.
- Executed sharding with consistent hashing for efficient data distribution and automated partition rebalancing.
- Formulated a versioned key-value store that supports cross-shard transactions using 2-Phase Locking and 2-Phase Commit with Optimistic Concurrency Control.

Unix Systems Programming Projects | C, C++, Python, Perl, Bash, QEMU

Jan 2023 – Present

- **KV Store:** A multithreaded key-value store with distributed transactions, supporting multiple clients and persistence.
- **ftruncate():** A Unix system call for adjusting the file size—either increasing or decreasing it.
- **Locks:** Wrote an RCU-based lock supporting concurrent readers and a single writer, ensuring atomic access to shared resources.
- **GPU Flamegraph:** A tool to visualize GPU (CUDA) kernel execution and power consumption through NVML and nsys.

BackGen - GoLang Backend Generator | ICT4SD | [Springer](#)

Jan 2023 – Aug 2023

- Developed a GoLang backend generator that generates server code based on REST API spec, reducing dev time by 50%.
- Validated on a Todo application, the tool generates nearly 48% of the code, significantly streamlining web app development.

Web Projects | React.js, Node.js, Flask, PostgreSQL, Heroku, HTML, CSS, JS, AWS-EC2, S3, SQL

Apr 2020 – Present

- **Expense Tracker** – Web app for tracking expenses with bulk expense creation and file export, attracting 100+ users in a month.
- **NYC Housing** – A d3 based web app for visualizing NYC housing data, enabling users to filter and analyze various parameters.
- **Short-Terms** – Chrome extension for summarizing web pages using Natural Language Processing and Spacy (before GPT).

EXTRACURRICULAR ACTIVITY

Our Tech Community (OTC) | ourtech.community | Admin

May 2022 – Present

- Hosted 400+ hours of weekly [OTC CatchUp](#) technical discussions, organized two in-person [MeetUp](#) events with 70+ attendees.
